

John Meola's Safety First!

Safety Meeting Topics
for WSA Members

April Safety Info

- Emphasizing Work Zone Safety Week
- Spring Creates Upswing in Incidents — Focus!
- Prepare Ahead and Report Incidents/Near Misses
- Defensive Driving
- The Weather: Don't Take It For Granted
- Hand & Finger Injury Prevention

WORK ZONE SAFETY WEEK THE WEEK THAT LASTS ALL YEAR!

- Drive Like You Work Here!
- See the Cone
- Respect the Zone

Education & Awareness are the best preventions.
Drive Defensively & Leave Room Ahead

SPRING FEVER

DON'T CATCH IT !!

SPRING FEVER
HOW TO ADDRESS
SHORT ATTENTION SPANS

- Annual bell curve of incidents starts trending upwards
- FOCUS!! Avoid distractions.
- Random multi-tasking = asking for error, fail, incident
- 99.99% preventable ; authorities will ask hard questions
- Longer daylight hours – we try to do more
- Fatigue; hydration; diet; exercise
- Get on board with your 'New Years Resolution'

PREPARE AHEAD & REPORT NEAR MISS INCIDENTS

Close Calls & Near Misses – every day, something is happening around us. Report these to management so we can discuss and train!

PPE – Now is the time start to looking at warm weather gear – make selections for upcoming nuclear summer.

Tools, Hardware... Check your gear and equipment for needs in upcoming busiest season.

DEFENSIVE DRIVING

- Emphasize AWARENESS and defensive positioning in and around traffic
- Pedestrians – Watch out because many of them are now distracted as well with phones, kids, etc.
- There has been a statistical surge in losses — including highway workers.
- LOOK with central vision – do not rely on peripheral vision to detect oncoming vehicles.
- PROTECT with distance; allow time for reaction – look and plan well ahead

THE WEATHER... NOT JUST SMALL TALK OR A 'NUISANCE'

- Spring rains = possible monsoons
- Think of hydro-planing possibilities on highways
- Take high water and flash flood warnings to heart!
- Watch out for sinkholes and other geological failures
- Other climactic aberrations – nothing would be surprising at this point...
- Prepare and beware (“be aware”)

HAND & FINGER INJURY PREVENTION

- Best Practice- ALWAYS USE A TOOL; glove; rag; other interface
- Avoid direct skin contact – unless it's a 'typewriter'
- Look where you place hand- finger- body
- Look for pinch, snag, edge, crush, tear, impale, etc.
- Mechanisms of injury – improper tool use; poor posture, strain, pressure point; slippage from poor grip
- Decal, sign, mark, warn, protect, advise
- Glove selection; surface, load, handle config.;
- No jewelry; no long hair; no loose ends; THINK, it happens QUICKLY!
- Slip & fall – boot laces and eyelets – enough to bring you down
